### **WhisperRoom™, Inc. Debuts New Audio Jack Panel**

**May, 2010** – In celebration of Better Hearing and Speech month, WhisperRoom™, Inc. the leader in portable/modular sound isolation technology introduces new Audio Jack Panel options. The new Audio Jack Panel (AJP) options officially debuted at NAB 2010, and is already being utilized by happy WhisperRoom clients.

The AJP options are the result of high demand from the audiology market, where WhisperRoom usage has grown significantly. “We have seen a substantial growth of audiometric applications utilizing WhisperRooms and we decided to add the jack panel options to our product line,” says Debbie Sweany, Director of Sales and Marketing. The WhisperRooms’ inherent sound reduction capabilities and flexibility make it a perfect solution for audiometric, hearing aid, and speech/language testing. The WhisperRoom is a portable, modular sound booth which provides the necessary attenuation to ensure accurate test data, and is a more economical choice over a large, permanent, steel structure.

The AJP is a 40” wall component with a prewired, flush-mounted (interior or exterior) insert available with 6 or 10 jacks. The 6-jack panel insert has 4, ¼” stereo phono jacks and 2 RCA connectors; and the 10-jack panel insert has 8, ¼” stereo phono jacks and 2 RCA connectors. There is a 26” x 36” wall window above the panel for optimum visibility for testing purposes. There is also a 2” cable passage below for those situations where additional cables need to be utilized. The AJP option is available for all models except the MDL 4230 (3.5’ x 2.5’).

WhisperRoom™, Inc. offers 20 sizes and two levels of sound isolation, a Standard (single wall) and an Enhanced (double wall) and a host of optional features. Sizes range from a modest 3.5’ x 2.5’ one-person unit to a room-size 8.5’ x 15.5’ unit. Educational discounts, monthly specials and GSA pricing are available as well as immediate world-wide shipping.
